## Small and Light, Common Type

## Features

- Easy to mount at a narrow space with small size and light weight.
- Convenient to adjust the sensitivity by external sensitivity adjustment control. (diffuse reflective type only)

CE

- Easy to mount by screw type in mounting hole.
- Built-in reverse polarity protection circuit.

Please read "Safety Considerations" in the instruction manual before using

%MS-5, MST-□ is sold separately.

## Specifications

Model		BM3M-TDT	BM1M-MDT	BM200-DDT	(A) Photoelectric	
Sensing t	уре	Through-beam	Retroreflective	Diffuse reflective	Sensors	
Sensing distance		3m	1m <sup>**1</sup>	200mm <sup>*2</sup>		
Sensing target		Opaque materials of Min. Ø8mm	Opaque materials of Min. Ø60mm	Transparent, translucent, opaque materials	(B) Fiber Optic Sensors	
Hysteresis		—		Max. 10% at rated setting distance		
Response time		Max. 3ms				
Power supply		12-24VDC== ±10% (ripple P-P: max. 10%)				
Current consumption		Max. 45mA Max. 40mA			(D)	
Light source		Infrared LED (940nm)				
Sensitivity adjustment		Fixed Sensitivity adjuster				
Operation mode		Dark ON		Light ON (Dark ON: option)	(E) Vision	
Control output		NPN open collector output •Load voltage: max. 30VDC== •Load current: max. 100mA •Residual voltage: max. 1VDC==				
Protection circuit		Reverse polarity protection circuit			(F) Proximity	
Indication		Operation indicator: red LED			Sensors	
Connection		Cable type			(G) Pressure Sensors (H) Rotany	
Insulation resistance		Over 20MΩ (at 500VDC megger)				
Noise immunity		±240V the square wave noise (pulse width: 1µs) by the noise simulator				
Dielectric strength		1,000VAC 50/60Hz for 1 minute				
Vibration		1.5mm amplitude at frequency of 10 to 55Hz (for 1 min) in each X, Y, Z direction for 2 hours				
Shock		500m/s² (approx. 50G) in each X, Y, Z direction for 3 times				
_ ·	Ambient illumination	Sunlight: max. 11,0001x incandescent lamp: max. 3,0001x (receiver illumination)			Connectors/ Connector Cables/	
Environ-	Ambient temperature	-10 to 60°C, storage: -25 to 70°C				
linein	Ambient humidity	35 to 85%RH, storage: 35 to 85%RH				
Material		Case: acrylonitrile butadiene styrene, sensing part: polycarbonate, bracket: steel plate cold commercial, bolt: steel chromium molybdenum, nut: steel chromium molybdenum	Case: acrylonitrile butadiene styrene, sensing part: acrylic, bracket: steel plate cold commercial, bolt: steel chromium molybdenum, nut: steel chromium molybdenum			
Cable		Ø4mm, 3-wire, 2m (emitter of through-beam type: Ø4mm, 2-wire, 2m) (AWG22, core diameter: 0.08mm, number of cores: 60, insulator out diameter: Ø1.25mm)				
Acces- sories	Individual		Reflector (MS-2)	Adjuster driver		
	Common	Fixing bracket, 4M bolt: 4, 4M nut: 4	Fixing bracket, 4M bolt: 2, 4M nut: 2			
Approval		(€				
Weight <sup>×3</sup>		Approx. 240g (approx. 170g)	Approx. 188g (approx. 105g)	Approx. 156g (approx. 88g)		

X1: The sensing distance is specified with using the MS-2 reflector, and it is the same when using MS-5 (sold separately).

The distance between the sensor and the reflector should be set over 0.1m. When using reflective tapes, the reflectivity will vary by size of the tape. Please refer to the "Reflectivity by Reflective Tape Model" table before using the tapes. %2: Non-glossy white paper 200×200mm.

X3: The weight includes packaging. The weight in parenthesis is for unit only.

%The temperature or humidity mentioned in Environment indicates a non freezing or condensation.

## Installation and Adjustment

#### **©** For installation

Model

MST-50-10

MST-100-5

MST-200-2

When using photoelectric sensors closely over two units, it may result in malfunction due to mutual interference. When installing the product, tighten the screw with a tightening torque of 0.8 N·m.

Do not impact on the unit with the hard object or bend the cable with excessive power. Otherwise, It may result in damage to the waterproof function.

#### ◎ For optical axis adjustment

#### • Through-beam type

- 1. Supply the power to the photoelectric sensor, after setting the emitter and the receiver facing each other.
- Set the receiver in center of position in the middle of the operation range of indicator by adjusting the receiver or the emitter right and left, up and down.
- 3. After the adjustment, check the stability of operation by putting the object at the optical axis.
- %If the sensing target is translucent body or smaller than Ø8mm, it can be missed by sensor because light penetrate it.

#### • Diffuse reflective type

- 1. The sensitivity should be adjusted depending on a sensing target or mounting place.
- Set the target at a position to be detected by the beam, then turn the sensitivity adjuster until position (a) where the operation indicator turns ON from MIN position of the sensitivity adjuster.
- 4. Set the sensitivity adjuster at the center of two switching position (a), (b).

%The sensing distance indicated on specification chart is for 200×200mm of non-glossy white paper. Be sure that it can be different by size, surface and gloss of target.

#### • Retroreflective type

- Supply the power to the photoelectric sensor, after setting the photoelectric sensor and the reflector (MS-2) or reflective tape face to face.
- 2. Set the photoelectric sensor in the position which indicator turns on, by adjusting the reflector, reflective tape or the sensor right and left, up and down.
- 3. Fix both units tightly after checking that the unit detects the target.
- XIf using more than 2 photoelectric sensors in parallel, the space among them should be more than 30cm.

※If reflectance of target is higher than non-glossy white paper, it might cause malfunction by reflection from the target when the target is near to photoelectric sensor. Therefore put enough space between the target and the photoelectric sensor or the surface of the target should be installed at angle of 30° to 45° against optical axis.

- %If the mounting place is too narrow, please use MS-5 instead of MS-2.
- ※Please use reflective tape (MST series) for where a reflector is not installed.

### Reflectivity by Reflective Tape Model

MST-50-10 (50×50mm)	70%
MST-100-5 (100×100mm)	110%
MST-200-2 (200×200mm)	170%

%This reflectivity is based on the reflector (MS-2).

※Reflectivity may vary depending on usage environment and installation conditions.

The sensing distance and minimum sensing target size increase as the size of the tape increases. Please check the reflectivity before using reflective

tapes.

%For using reflective tape, installation distance should be min. 20mm.
